

Sports Medicine Fellowship in Aspen, Colorado for 2012-2013

Sports Medicine

Arthroscopy

Winter Sports Trauma

The Aspen Sports Medicine Foundation (ASMF) is currently accepting applications for our 2012-2013 Sports Medicine Fellowship. This fellowship takes place in Aspen, Colorado beginning on August 1, 2012 through July 31, 2013. The ASMF Fellowship is a combined effort between Aspen Orthopaedic Associates, The Aspen Sports Medicine Foundation, and Aspen Valley Hospital. Our fellowship is accredited by the Accreditation Council for Graduate Medical Education (ACGME). This is of significance to our applicants due to the fact that the American Board of Medical Subspecialties approved a subspecialty certification in orthopaedic sports medicine in March of 2003. Only those Fellows graduating from an accredited program will be allowed to sit for this subspecialty exam.

Our Fellows Receive:

- * A salary of \$50,000.00
- * Benefits (after one month)
- * \$40.00 monthly cell phone allowance
- * Two weeks of paid vacation
- * Season ski pass with the Aspen Skiing Company
- * Two bedroom apartment to rent (no pets allowed) with highly subsidized rent.

Since ASMF began in 1978, we have had more than 50 physicians successfully complete our program. The ASMF Fellows learn specialized surgical procedures, assessment and diagnostic techniques and emergency care of orthopaedic injuries. Research is a major focus of the fellowship program and findings are presented at regular orthopaedic grand rounds at Aspen Valley Hospital as well as at national and international orthopaedic conferences. Aspen offers an exciting and challenging experience for our Fellows because of our very active local and visiting population, our large skiing community, and the wide variety of athletic events we cover including: high school varsity athletics, world cup skiing and NORBA mountain bike races. We have developed a unique and comprehensive teaching curriculum for sports medicine and sports trauma consisting of didactic lectures, weekly x-ray conference, journal club, audio-visual training, hands-on cadaver dissections, as well as an extensive clinical experience.
